Why TeacherGeek? Because we sell the best products to teach valuable concepts and foster innovation. We know the best way for students to learn is through experiencing the whole cycle: understanding concepts, designing, engineering, and most importantly improving: redesigning and innovating.

We sell innovative products that teach students about engineering, math, science and technology while being just plain fun. Browse through our [catalog](#) and challenge your inner inventor, or check out some [videos](#) to see what our gizmos can do! We offer packaged activities as well as separate components—the possibilities are endless! Awesome teacher-created [labs and guides](#) are included for free with each of our activities.

Here's the really cool part: You can design our products to look however you want. There's no set way our Easy Engineering projects have to go together. Our labs get you started, but you can go anywhere from there. Each creation can—and should—be unique!

Take STEM education to a whole new level. Teach students the best way possible—through hands-on learning and development with products that allow them to test their ideas and grow as creators!

*TeacherGeek About Us Copy:*

As a technology teacher, I found that we were constantly customizing project components for students, modifying existing products on the market to suit the particular needs of our lessons. The pieces never fit quite right, and having students try to reshape the parts was dangerous and took away from the overall focus of the lab. One day I decided there must be a better way, and TeacherGeek was born.

I began designing and manufacturing my own custom components to give students the best educational experience possible. What I had initially created as a solution to our own particular needs skyrocketed as more and more educators heard about my creations and wanted to order them for their own students. TeacherGeek continues to be a family-owned, customer-centered business with a staff of dedicated professionals. We love hearing about your experiences with our products. Thank you for being a part of our TeacherGeek family!
